15

ABSTRACT OF THE DISCLOSURE

There is provided a honeycomb structural body with a high cell density of 600 cells/in^2 or greater and excellent catalyst loading properties. In a honeycomb structural body 1 comprising a plurality of cells formed by providing partition walls 10 composed mainly of cordierite, which has the chemical composition SiO_2 : 45-55 wt%, Al_2O_3 : 33-42 wt%, MgO: 12-18 wt%, in a honeycomb fashion, the density of the cells 15 is at least 600 cells/in² and the pore volume of the partition walls 10 is at least 30%.
